

## PROFESSIONAL COMPETENCE OF SYSTEMS APPROACH TO THE STUDY OF EDUCATION AND TRAINING SYSTEMS

**Eshmamatov Ismoil Abdusalomovich**  
Head of the Scientific and Methodological Center  
UZBEKISTAN

### ABSTRACT

The essence of article is a social means (a tool) knowledge between the individual and society in education and training, assign target content to enhance and attitude function. That is why education and training of human perfection, providing community development and educational factors that show desirable. Society collection, storage, sorting and address (consumers) the possibility of transfer to be the result of increasing the rate of development.

**Keywords:** Education and training, professional competence, social level, social competence, communicative competence, intellectual level.

### INTRODUCTION

The human had reached to the opportunity to move of the experience from other space to another space and time. This increased the number of specialist vocational training requirements. These requirements are based on the teaching and learning process of management point of view of the general-cultural, psychological, social and occupational groups. Group training programs, teaching methods, which is related to the field of education will facilitate the collection and systematization of information. The teacher's role is considered important Ya.Vagramenko S.Bogdanova and V.Rijovs showed the form of the main directions of informatization of educational process. In every direction, purpose and objectives, teaching methods and education and the education of the personality of the recipient will be allocated. This in turn will facilitate the process of transmission of information in the process of teaching.

The teacher is the person who determines the current state of education in the development of social and economic life of society must recognize that it depends on the teacher's professional professionals. The practice of international education overview that the personnel competence to meet the demands of the labor market, namely the labor market, professional skills and personal qualities and special (professional and psychological) depends on the training to understand the requirements imposed.

### DISCUSSION

If take the theory of competences, accordance the implementation of the following classification:

- Political and social competence (responsibility, to participate in the group to make decisions, to ensure the regulation of the conflict situations, is expressed in the formation and growth of civil institutions);
- Relating to the multi-cultural society Competency (other representative sample of culture and respect for other languages and the ability to live with the religious figures);
- Possession of a written and verbal competence (dealing with labor, social life and full participation (not separated));

- Life long learning competence (the ability to occupy them interested in science and technology achievements, and it will be demonstrated);
- Arising during the emergence of the information society Competency (learning how to use new technologies to discriminate their strong and weak aspects of the media and the advertising information transmitted by means of a critical attitude).

Professional competence (the ability to) for the successful work of the specialist content is the fact who U. Begimqulov the process of education as the future of the organization and management of information. Therefore, to respond to the professional competence to define the concept of a systematic approach, professional competence "(product manufacturer) and the consumer," "product (information) position (consumer) transmission method", "taking into account the requirements of consumer products ( information) is to "pay special attention to aspects such as R.Samarov believe this description:" the solvency of professional (competence), an expert in the field of specialized theoretical knowledge and professional skills, be able to practice fully understood. According to the solvency of professional: functional, intellectual and social levels, such as the situation plays an important role in terms of its professional system would work product, a product that is produced, and could not meet the requirements or can be defined to distinguish. "

## ACKNOWLEDGEMENTS

The specified level of professional competence level of the subject of research by taking accordance of the specific aspects of it, we think it appropriate to review the implementation of the following:

- professional competence level of functional educational system, professional competence, and represent the highest level of professional skills, professionalism is expressed in the case of a clear picture of the progress in the future;
- the level of professional competence intellectual, professional approach functions in a systematic way, to solve problems in a variety of professional intellectual potential is expressed;
- the level of professional competence of the situation to engage in professional activities based on standard and non-standard situations arising during characterized in resolving the target;
- the level of professional competence, professional communication and integration skills to complete tasks, including collective tasks, expressed in the collective success;
- expert level of professional competence of the individual's character, aspiring to a professional career growth, it can be expressed.

## METHODOLOGY

To illustrate the level of competence of the national-cultural factors to take into account the role of the functional effect. It can be shown on the basis of the results of research conducted to solve problems in a variety of professional mental potential use (the idea of professional competence), collective tasks, team success (level of professional competence) and a specialist on his work, (the level of individual professional competence) under the influence of the national-cultural factors influence the succession.

T.Bushuy behavior adequately expressed in this specific case - the form of communicative competence held, the perception of the connection to the complex in its own way. Uzbek national culture in succession in the system of personal, social and professional relationships

manifestation of age or those who are less experienced people age and experience to advise, recommend and advise you as to public and social life, as well as related professional knowledge (information) is delivered in the form. This knowledge (information) to understand the "father-son" and "mother-daughter", "Grandpa, grandson", "Grandma grandchildren", "master-apprentice", "brothers", "singil- sister "relationship forms can be shown separately. Every child is a form of coverage of knowledge (information) and at the practical use of selected methods taking into account the individual characteristics of the recipient. This important evidence. The first proof of teaching dealing with the various age and gender, as well as a variety of specialized professional with more than 10 years of professional experience with 134 teachers and social competence results of the survey conducted in order to examine the level of egallanganlik it. Noting "the father or the mother of morality, who taught you?" He questions. Because of social competence and a display of information in determining the level of the first national-cultural feature allows you to identify the source. 89.5% of respondents participated in the survey, "grandparents" learned response. This figure, in turn, they are traditional families, the grandparents together in one place (house or apartment) in confirming the pleasure life.

## RESULTS

It should be noted that the Uzbek families, children and parents to contact you, they tend to follow the instructions and requirements shall be discussed by the child, the child with the child's name was called, a soft voice, respond to social norms. Family and members of his psychological evaluation that was chosen as the failure to comply or not to comply with the principle of social indicators. For this reason, the traditional upbringing of the children in the family disgrace, show respect and younger, are characterized by qualities such as being in respect of the profession.

As the evidence obtained during the second survey respondents, "You are a team ethics, said the order from whom did you learn?" The answer to the question below. 76.5% of respondents, "his father and mother to learn," he outlined. Cultural and social characteristics to gain understanding of the importance of this issue. For example, professional societies, respect for older people, regardless of his position, age put a small nod to respond to any issues older and a lot of professional experience, hear the opinion of people of high social status after the response is acceptable. If the person does not comply with the requirements of this considered a violation of social norms, and that his conduct was unlikely to be given a psychological evaluation. Because the high level of social impact, which performs tasks such as bringing tarktibga redirect her behavior. Clearly, the public display kompetentsiyalarini, professionalism and competence, characterized in that they complement each other. Ensuring the level of a person's cultural and intellectual development of education with the labor market to find a decent job, provide for the spiritual and material needs of education and is based on efficiency of the educational system and the need to understand the requirements of the labor market improved. This in turn requires the development of professional thinking in the educational process.

That is why the issue of professional kompetentsiya point of view of different disciplines (ie systemic) approach should be considered. The company has sociological, psychological, cultural, religious, personal as reflected in the contents, which are characterized by the complexity of the scientific study. If one of the competencies needed to engage in professional activities in an objective manner of psychological and professional work successfully for the professional skills necessary to hold a specialty or professional

requirements indemnified by profession, the formation of specialized experts to take personal qualities to be determined, the purpose of this study it in a systematic way.

Competence can show the importance of a systematic approach for the study of the following:

- First, the researchers describe any competence as a result of a systematic approach to study national and cultural factors influence the level of the situation and would be easier to identify. The result is a kind of a national culture represents a property is determined;
- Second, kompetentsiyalarni to determine the level of theoretical and practical importance of their involvement and the efficiency of the mechanism to show the specific type of activity. This is followed by recommendations and conclusions of which have a private interest;
- Third, the professional competences through a systematic approach to the study of the learning process to develop recommendations to improve the efficiency of the process and to bring them in practice.

## CONCLUSION

Professional Competence study clearly chosen profession, professional, personal and psychological tests designed to determine national values, national, cultural and sociological surveys designed to identify the characteristics of professional success and evaluation methods should be used. The analysis of the data collected using this method as a means of folklore samples are used to represent the ethnic and cultural characteristics can be obtained.
