

NIFEDIPINE REGIMEN IN TOCOLYTIC THERAPY, SIDE EFFECTS AND THEIR MANAGEMENT: CASE REPORT

Anila Karameta

Obstetric-Gynecologic University Hospital of Tirana “Koco Gliozheni”

ABSTRACT

Nifedipine is the main tocolytic agent used in OBSTETRIC-GYNECOLOGIC HOSPITAL OF TIRANA “KOCO GLIOZHENI”. Good tocolytic efficiency, easy way of administration, less side and adverse effects than other tocolytic agents, low cost, make nifedipine our tocolytic agent of choice. Nifedipine has vasodilating effects, so that its administration can be associated with several side effects. Monitoring of side effects and their good management are very important for the successful management of premature labour.
